

Grant Scramlin

Macomb, MI ♦ (586) 610-8027 ♦ gscram@umich.edu ♦ [linkedin.com/in/grant-scramlin-731a60362/](https://www.linkedin.com/in/grant-scramlin-731a60362/) ♦ github.com/grant-scramlin

EDUCATION

University of Michigan, Ann Arbor, MI

Credits: 62/142 Expected 2028

Bachelor of Science in Engineering, Dual Major in Computer Engineering and Robotics

GPA: 4.00

Relevant Coursework: Programing and Data Structures, Calculus I-IV, Discrete Math, Robot-Human Interactions

SKILLS

Software: C++, C#, Python, Javascript, HTML

Tools: Git/GitHub, MATLAB, VSCode

Engineering & Robotics: Fusion360, FANUC HandlingTool

Web Technologies: JavaScript, CSS, HTML5

PROJECTS

Michigan Mars Rover Brushed Motor Controller (C++, Embedded Systems, CAN)

- Helped write firmware for Michigan Mars Rover's new Brushed Motor Controller module; worked on firmware for various components including H-Bridges and current sensors, and helped integrate into a well-organized C++ class
- Allowed for safety and modularity of the Rover, protecting hardware components from current overload, hardware malfunctions, and inconsistent motor performance

FIRST Alumni and Mentor Network at Michigan - Ri3D (Fusion360, OnShape, C++, Java, CAN)

- Built a FRC Robot for the 2026 season in the first 72 hours of the season. Worked collaboratively to design a robot featuring an intake mechanism, hopper, shooter, and climber
- Maintained organization in stressful environment through clear CAD, hardware, and software progress updates
- Worked to inspire local FIRST Robotics teams by providing ideas and prototype examples for robot subsystems

EXPERIENCE

FANUC America Internship

May 2026 - August 2026

Software Engineering Intern, Global Software Standards & Validation

- Developed a Python-based software tool to automate documentation generation and formatting across 1,600+ files, including example scripts and command-line interface tasks, improving the efficiency of documentation workflows
- Developed and modified FANUC Teach Pendant programs and PMC (Ladder Logic) files to support automation and manufacturing needs for Ford Motor Company as part of the Global Software Standards & Validation (GSSV) team
- Utilized Python, PMC/Ladder Logic, ClearCase, and other engineering tools to develop, maintain, and support software and automation solutions for the Ford GSSV team

University of Michigan Housing

August 2026 - Present

Residential Advisor

- Facilitate floor meetings and events, and maintain open communication with residents, fostering a welcoming and connected residential community
- Connect residents with appropriate University resources, and respond to resident needs, including conflict resolution, questions, and lockouts, while maintaining a safe and supportive living environment

FIRST Robotics - FRC 4810

May 2025 - Present

Mentor, Alumni, FRC Ri3D Participant

- Help train and mentor a team of over 65 students, teaching fundamentals of programming, finite state machines, electrical circuits, control systems, and problem solving
- Remotely support team while away for school, creating followable training videos, answering questions through the team Slack, and helping the team stay organized with GitHub

Westwood Assisted Living

May 2025 - December 2025

AM Dishwasher

- Maintained a clean and organized environment, washed and sanitized dishes, utensils, and equipment during 8–12 hour shifts, ensuring timely support for both kitchen staff and residents
